PROFESSIONAL SUMMARY

Technical Support Specialist with 15+ years of experience supporting healthcare, e-commerce, ERP, SaaS, and other complex business applications. Strong background in Tier 2+ troubleshooting, SQL-based investigation, API and integration debugging, log analysis, customer communication, documentation, onboarding, and support operations.

TARGET ROLES

Product Support Engineer, Technical Support Engineer, Application Support Specialist, Support Operations Specialist

CORE SKILLS

Technical Support & Troubleshooting

- Tier 2+ issue resolution and root cause analysis
- Incident triage, prioritization, and SLA-aware support
- Complex application and workflow troubleshooting
- Bug reproduction, escalation, and technical issue documentation
- Customer-facing support for technical and non-technical users

Tools & Platforms

- Zendesk, Redmine
- SQL Server Management Studio, MySQL
- Cloudflare, Vercel, cPanel
- Next.js, React, TypeScript, Supabase/Postgres
- Clerk authentication, including Google and Microsoft SSO configuration
- OpenAI API integration for assistant, document, and embedding workflows
- AWS S3 attachment storage and GuardDuty scan-status workflows
- Athena Practice EMR
- Excel and structured data analysis

APIs, Integrations, Data & Automation

- API troubleshooting, request/response analysis, JSON payloads, and webhooks
- Integration debugging across data-driven systems
- SQL querying, investigation, validation, and data analysis
- Log analysis using Graylog, Dovecot, Exim, and server logs
- PowerShell and Python scripting for automation, reporting, and monitoring
- SaaS product discovery, workflow design, and practical AI-assisted feature development

Communication & Collaboration

- Clear written and verbal customer communication
- Fluent in Spanish
- Knowledge base and support documentation development
- Cross-functional collaboration with support, engineering, operations, and client stakeholders
- Peer mentorship, onboarding support, and knowledge sharing

PROFESSIONAL EXPERIENCE

Independent Technical Consultant

4171 Tech | Sept 2025 - Present

- Serve as primary technical support contact for clients, troubleshooting issues across applications, infrastructure, hosting, and integrations.
- Analyze Graylog, Dovecot, Exim, and server logs to identify root causes of system failures, authentication issues, mail delivery problems, and misconfigurations.
- Troubleshoot API and integration issues, including JSON payloads, webhooks, request/response behavior, and cross-system communication failures.
- Develop PowerShell and Python automation scripts to streamline reporting, monitoring, and issue detection.
- Implement system security improvements, including access controls and login protections.
- Support deployments, DNS configuration, and hosting environments across Cloudflare, Vercel, and cPanel.
- Communicate technical findings clearly to non-technical clients and provide practical recommendations.

Selected Project: HIPAAList

Private SaaS product project | 2026

- Identified a recurring client need around HIPAA readiness, documentation, vendor tracking, staff training, and operational evidence, then used that need as the basis for exploring what it would take to build a SaaS product.
- Built a Next.js, React, and TypeScript application with Supabase/Postgres-backed workspace data, Vercel deployment, and organization-scoped product/support workflows.
- Implemented Clerk-based authentication, organization membership, staff invitations, role/permission handling, and Google/Microsoft SSO configuration.
- Integrated OpenAI-backed assistant and document workflows, including intent classification, bounded server-side provider calls, document tailoring, suggested edits, embeddings, and no-PHI guardrails.
- Developed product areas for organization profile/facts, recommended work, documents and approvals, staff roster, vendor/BAA tracking, security risk assessment, training, audit history, and portable organization exports.
- Added attachment handling with server-side validation, S3 storage, GuardDuty scan status handling, and download/preview controls for clean files.
- Maintained feature-local documentation and tests, including 120+ Vitest tests across helper logic, API clients, content generation, exports, training, and workflow rules.

Application Support & Operations Specialist

Global nonprofit organization | Aug 2015 - Sept 2025

Organization name omitted on this public profile for privacy; details available in application/interview context.

Roles included Application Support Team Member, Operations Specialist, and Agile Facilitator.

- Provided end-user support for Athena Practice EMR, troubleshooting configuration issues, workflow disruptions, and unexpected system behavior across clinical and administrative users.
- Supported a large multi-domain internal application used across accounting, purchasing, healthcare, planning, scheduling, project management, and other operational workflows.
- Processed user-submitted bug reports and feedback requests, reproducing issues, gathering evidence, resolving support-owned items, and escalating with clear technical context when engineering involvement was the right next step.
- Used built-in API request viewer tooling, detailed application logs, correlation IDs, user context, and workflow details to investigate reported issues and separate user, data, configuration, and application behavior.
- Diagnosed recurring issues and coordinated with technical teams to resolve bugs, system limitations, and workflow problems.
- Managed and prioritized support requests using Redmine, maintaining clear communication and timely follow-up.
- Translated user-reported issues into detailed, actionable reports for technical teams.
- Supported system implementations, upgrades, and data migrations, helping users adapt to new workflows.
- Created and maintained user documentation and training materials to improve adoption and reduce repeated support requests.
- Collaborated with cross-functional teams to improve system reliability, user experience, and support operations.
- Facilitated team coordination and knowledge sharing across support operations.

IT & Operations Specialist

Saltwater Edge | Middletown, RI | 2006 - Aug 2015

- Provided technical support for ERP, e-commerce, and order management systems.
- Managed customer-facing support through Zendesk while maintaining high service standards.
- Investigated and resolved system and workflow issues affecting operations and customer experience.
- Identified inefficiencies and implemented process improvements to reduce errors and improve operational performance.

E-Commerce & Systems Support

Specialty Pool Products | East Windsor, CT | 2002 - 2005

- Supported online sales systems, including order processing, invoicing, and customer workflows.
- Assisted with internal tools and web-based systems used by customer service and operations teams.

EDUCATION

Ellington High School

Ellington, CT

Class of 1999

Asnuntuck Community College

Coursework in QuickBooks and Accounting

SELECTED RESUME STRENGTHS FOR PRODUCT SUPPORT ENGINEER ROLES

- Strong fit for roles requiring customer-facing troubleshooting, API and integration support, log/code-adjacent investigation, and clear technical communication.
- Practical support experience across healthcare, e-commerce, hosting, and operational systems.
- Comfortable documenting reproduction steps, reporting issues internally, and helping teams understand recurring support patterns.
- Able to contribute to knowledge bases, support enablement, and continuous improvement efforts.
